

Anatomy of a Baptistry

Piedmont Fiberglass warranties its baptisteries for 10 years against structural defects. 1 year for interior surfaces. Heater and drain units are warranted through manufacturer.

To insure the easiest possible installation, DO NOT FRAME for the baptistry until it arrives on site.

Model shown is double entry
For single entry models, Left or Right entry is determined by sitting in the congregation facing the Baptistry.

Optional Water Heaters may be placed between side wall bracing on tank.

Drain Holes are not cut at the factory. Floor supports have been trimmed in each corner to accommodate drain.

Note: UNLESS THE OPTIONAL AQUA SEAL PROCESS IS ORDERED THE UNIT MUST BE DRAINED AFTER EACH USE. LEAVING WATER IN THE UNIT FOR EXTENDED PERIODS WILL VOID THE WARRANTY.

AQUA SEAL

Aqua Seal is a process used to allow for water to be left in the baptistry for up to 3 months between cleanings. This process is used during the manufacturing of the baptistry and cannot be added to an existing unit. Due to the use of high performance vinyl ester resins there is an up-charge of 25% for this process.

Gel Stone Interior Finishes

This is a unique speckled finish that gives the tank a stone appearance. The Gel Stone finish is offered in three colors including Grey, Black, and Cream. Consult your Factory Representative for samples and pricing.
